IMPORTANT INFORMATION RELATING TO THIS REPORT

This report is written with reference to Australian Standard AS 4349.0-2007 Inspection of Buildings (General requirements) and AS 4349.1-2007 Inspection of Buildings (Pre-purchase inspections - Residential Buildings) and is the result of a VISUAL INSPECTION ONLY. It is intended to be read in its entirety. If there are any discrepancies between the "Report Summary" and the Detailed Report, the detailed report information should be relied upon. It is important that you carefully read the complete report including the Scope of Inspection and the Scope & Limitations sections prior to making any critical decisions that may be influenced by this report.

Significant structural defects or maintenance items that have a substantial cost associated with repairs, or where in our opinion may have an influence on the decision to purchase the property are documented in this report.

Where reference has been made to termites, maintenance items or defects of significance we recommend that prior to making a decision to purchase the property the advice of a suitably qualified tradesman who is able to quantify the extent and cost of appropriate remedial action is obtained.

Where reference has been made in this report to cracking, settlement, movement or an opinion has been provided on structural integrity, it is important to note that we are not experts in this area and our advice is limited accordingly. If considered necessary, further advice should be obtained from a Structural Engineer before critical decisions are made. Any cracking reported should be monitored for further movement. Superficial or hairline cracks that are considered to have no immediate structural implications will not be identified. Please refer to the Compliance Report to ensure that you identify any unapproved or non-compliant structures.

Property Access

Restricted access caused by stored goods, furnishings, window treatments, floor coverings, security devices, vegetation, duct work, confined spaces, insulation and other impediments will limit the scope of this inspection. Whilst every effort has been made to conduct a comprehensive roof cavity inspection there are limitations relative to safe access requirements which include low clearances, the availability of safe walk-ways and work-safe roof temperatures, conditions which when applicable will limit the scope of the inspection. The roof exterior is inspected when accessible from a 3.6 metre ladder, or from ground level where there are height restrictions.

PROPERTY REPORT

SCOPE OF INSPECTION

It is our role to conduct a thorough visual inspection of the property and report only on areas of concern, identifying critical defects for an intending purchaser, insofar as an inspector can reasonably identify those defects. When reading this report, the age of the building must be taken into consideration. Some items may not have been detailed as they are considered a normal occurrence or general wear and tear for a building of this age. Electrical appliances and utilities such as water reticulation, electrical wiring or gas installations, swimming pool and spa equipment were not inspected. Qualified technicians should be consulted in regard to these items. The report is not designed to quantify features of the property, generally, ongoing maintenance items, upgrading, cosmetic works and minor defects or faults will not be detailed.

The following extracts from the Australian Standard AS 4349.1-2007 should assist the reader to understand how we have approached the inspection and define the general focus of the report:

2.3.1 GENERAL - The inspection shall comprise visual assessment of the property to identify major defects and to form an opinion regarding the general condition of the property at the time of inspection.

4.1 GENERAL - It is necessary to inspect each of the areas and items set out in Section 3; however, it is not necessary to report on each one. An inspector may choose to report only on an 'exceptions basis', i.e., listing only defects, rather than also reporting items that are in acceptable condition.

STANDARD INDICATORS

The Property Inspector uses the following terms when describing the standard of a building or a particular item being evaluated:

No significant defects have been identified

This overall condition is applied where the inspector has not identified any defects that are considered to be significant from a structural or functional perspective. The subject area may present with minor defects. Remedial action, if required, is discretionary. Good, Fair or Poor may be used when an area has been given this condition.

Defects have been identified

This overall condition is applied where the inspector has identified defects that require remedial action or investigation. Remedial action is considered to be necessary rather than discretionary. Good, Fair or Poor may be used when an area has been given this condition.

GOOD: The feature subject to comment is, in the inspector's opinion, of sufficient standard to not require any significant remedial action. There may be imperfections in the finish or the structure.

FAIR: The feature subject to comment is, in the inspector's opinion, usable but has deteriorated and would benefit from cosmetic or remedial repair work. For instance, painting may be required, render may require patching, and door fittings may require adjustment or repair.

POOR: The feature subject to comment is, in the inspector's opinion, requires remedial action. Repairs or replacement are considered necessary rather than discretionary.

All of the above terms are used having regard for the age, quality of workmanship, style and type of construction of the building being inspected. For example, the features and finishes considered "good" in a 50 year old building are not necessarily going to be so in a modern dwelling. Our inspectors do not quantify the cost of repairs to any defects as this will be highly variable based on your service provider and the remedial action chosen.

What the Inspector Examines to Prepare a Property Report

To provide relevance and value for our readers, the following pages show (but do not limit) aspects of the property that may be examined, where visual inspection is possible. These items have been extracted from the Australian Standard AS4349.1—2007 Inspection of buildings (Pre-purchase inspections - Residential buildings) and are considered as the inspector reviews each room or area. In most circumstances comment on a particular area or item may only be provided in the event of an adverse finding considered to be worthy of mention. The inspector did not move or remove any wall coverings, floor coverings, furnishings, equipment, appliances, pictures or other household goods. In an occupied property, these items may be concealing defects.

WALL CONSTRUCTION

Distortion (significant), nail popping, defective lining, dampness/water damage, cracking, defective or damaged plaster/render
Settlement cracks, if present, need to be monitored over a period of time to determine if an ongoing structural problem exists. If any reference has been made in this report to cracking, settlement and/or movement, it should be noted that we are not experts in this area and further advice should be obtained from a Structural Engineer.

FLOORS

TIMBER: Springy or squeaky boards/sheeting, timber decay (rot), out of level – significant, undulations - significant, dampness/water damage

CONCRETE: cracking, out of level – significant,

HARD FLOORING: cracking, loose or drummy units, dampness/water damage

INTERNAL & EXTERNAL DOORS & DOOR FRAMES

Binding doors, defective hardware – significant, rotting/corroded frames, loose/badly fitting doors, damage

TIMBER & METAL WINDOWS

Putty/glazing sealant, broken glass, rotting frames (timber), rotting frames, corrosion (metal), sills, fittings/hardware, damage

In most cases access to windows is restricted by window treatments, furniture or security locks. Older style timber windows can sometimes bind with the frame generally due to paint build up. This is viewed as a general maintenance issue. Sash windows sometimes require maintenance to the window balance mechanism or sash cords. We are not able to guarantee that windows will operate smoothly. Sometimes window runners, sashes and balance mechanisms will require maintenance or replacement.

PAINTWORK

The condition of painted surfaces is often a subjective matter. Areas that appear to be acceptable when furnished may not always be considered so when devoid of obstructions. Paint work is normally not considered in Property Inspections. To prevent wood decay of timber surfaces and deterioration of metal components, the condition of these surfaces should be monitored and repainting carried out regularly. Corrosion of any metal roof sheeting should be repaired, treated and painted to avoid water leakages. Painted surfaces can mask areas where timber has deteriorated. Our visual inspection may not detect instances where this has occurred.

The opinions provided here are of a general nature only, given that there can be significant differences in the condition of painted surfaces in each area of the property. The reader of this report is urged to conduct their own detailed inspection before reaching a conclusion regarding the acceptability of painted surfaces

WET AREAS

Fixtures and fittings, ventilation, cistern/pan, taps, basins, tubs, leakage, sealants, drummy/cracked/missing tiles, grout defects, vanity, shower leakage, broken/cracked glass

If a wet area was not in service prior to and or at the time of inspection and no elevated moisture readings were recorded, or there was no visible evidence of current water leakage, then it is possible that an existing water leak will remain undetected.

WATERPROOFING

A VISUAL INSPECTION OF THE AREA CANNOT PROVIDE CONCLUSIVE EVIDENCE THAT THE AREA IS WATERPROOF. Compliance with Australian Standard AS 370-2004 Waterproofing of Wet Areas is critical to meeting waterproofing requirements.

Should conclusive evidence be required regarding the integrity of waterproofing of wet areas, in particular shower areas, we recommend that a qualified technician be engaged to complete a comprehensive test to include:

Capping the shower rose and leaving the water reticulation system under pressure and then checking for evidence of water leakage around tap spindles etc. (the sound of escaping air when the shower rose cap is removed indicates a water tight system). The technician may be engaged to complete a comprehensive pressure test of the entire water reticulation system.

Plugging the floor drain of the shower cubicle and filling the base with water to the maximum level. Allowing the water to remain in the base for an extended period and checking that the level has not dropped. If the water has diminished it is most likely that the waterproofing system has failed. In this event, extensive repairs to correct the problem are often the outcome.

KITCHEN

Fitout, sealants, ventilation, taps, leakage, sink, drummy/cracked/missing tiles, grout defects

This report does not cover any matters relating to the operation of electrical or gas appliances. Any comments made in this regard are from a general observation only.

INTERNAL & EXTERNAL STAIRCASES

Stringers, handrails, balustrades, newel posts, treads (goings), risers

INTERNAL ROOF SPACE

Framing, insulation, sarking, party walls (if applicable)

Sarking is a foil insulation/vapour barrier. Used in conjunction with bulk insulation, sarking provides an ideal insulation system for the control of heat and condensation. Sarking can only be installed during construction.

EXTERNAL ROOF COVERING, FASCIAS, GUTTERS & DOWNPIPES

Tiles/slates, sheet roofing, flashing, skylights, vents, downpipes, valleys, guttering, eaves, fascia boards, barge ends

It is important to note that a visual inspection of the roof covering may not identify roof leakages. We do not guarantee that the roof will not leak in all weather conditions. Roof design can have a significant impact on roof drainage. Low pitched construction can, in adverse weather conditions lead to flooding of the roof cover. Effective roof drainage is absolutely critical for a flat framed or low pitch roof. Flooding of the roof cover can result in water ingress within the building envelope. Roof drainage and the stormwater system are not tested at the inspection. Inadequate, blocked or non-existent stormwater drains are often accountable for problems relating to roof drainage. Repainting of timber can mask the existence of timber rot. We cannot guarantee that all timbers are sound. A visual inspection may not, in some circumstances, detect roofing timbers affected by rot.

EXTERNAL WALLS & NON STRUCTURAL RETAINING WALLS

Bricks, mortar, render, cracking/movement, dampness, visible flashing, weep holes, joint sealants, perpend, decay

Settlement cracks, if present, need to be monitored over a period of time to determine if an ongoing structural problem exists. If any reference has been made in this report to cracking, settlement and or movement, it should be noted that we are not experts in this area and further advice, if considered necessary, should be obtained from a Structural Engineer.

PATHS, PAVING & DRIVEWAY

Cracking, movement, uplifting, sinking, alignment, roof penetration

FENCES & GATES

Palings/panels, rails, posts, sagging, timber decay (rot)

SUB FLOOR

Dampness, debris, drainage, ventilation, cracked or leaking pipes

TIMBER CONSTRUCTION: bearers & joists, framing, piers/stumps

SUSPENDED CONCRETE FLOOR CONSTRUCTION: concrete condition, cracking

If moisture is noted, it is recommended that the sub-floor area be monitored to ensure that surface and sub-surface moisture ingress is not an ongoing issue. If the area remains damp, consideration should be given to upgrading subterranean and surface drainage systems to ensure that moisture is directed away from the building foundations and the sub-floor area is kept dry. A qualified drainage expert should be consulted with regard to drainage issues.

Many serious foundation problems are caused by reactive soil types and trees and gardens being planted too close to the building. Generally, clay soils which are common in the ACT, are reactive soils. Large trees use vast amounts of water and can quickly draw moisture out of the ground during dry periods, this results in destabilised moisture content of the soils around the building and ultimately may cause a foundation problem. Over watering gardens close to the building may have the opposite effect, especially with clay soil. Over watering increases the moisture content of the soil which can result in "heaving" of the foundations adjacent to the garden. When watering close to the building you should avoid 'pooling' of water in a particular area, as this also affects the moisture content of the soil which in turn can cause damage to footings and foundations. Too much or too little water near the perimeter of the building may cause serious problems with foundations and footings and damage can cause major structural problems, resulting in costly repairs.

HINTS FOR AVOIDING PROBLEMS AND COSTLY REPAIRS:

- Water evenly close to the building and do not over water
- Ensure the ground is graded away from the walls of the building and that the property has adequate drainage
- Promptly repair broken downpipes, leaking taps, sewerage pipes and other water services
- Hot water system overflows should be directed away from the area immediately adjacent to the foundations and the services maintained to ensure excessive leakage does not occur
- Garden beds should not be located against the house

SPECIAL PURPOSE REPORTS

Improvements such as swimming pools and spas are subject to a Special Purpose Report and are not included in our inspection and reports. We recommend that a qualified technician be engaged to report on these items and to advise on current regulations relating to safety fencing and equipment.

This report is **intended to be read in its entirety**. Please read the detailed inspection information and the Scope & Limitations of Report sections before reaching any conclusions regarding the condition of the property. Any person who relies upon the contents of this report does so acknowledging that the following clauses, which define the Scope and Limitations of the inspection, form an integral part of the report.

SCOPE & LIMITATIONS OF OUR INSPECTION

This report has been prepared as a result of a **VISUAL INSPECTION** with reference to the requirements of Australian Standard AS 4349.0-2007 Inspection of Buildings (General requirements), AS 4349.1-2007 Inspection of Buildings (Pre-purchase inspections - Residential Buildings) and AS 4349.3 - 2010 Inspection of Buildings Part 3: Timber Pest Inspections. It is limited to the condition of those areas of the property that were fully accessible (see Safety and Reasonable Access) and visible to the inspector at the time of inspection. In the case of a Strata type property, our inspector only undertakes an examination of the interior of the unit.

AS 4349.1 – 2007 Inspection of buildings excludes reporting of the following items: footings, concealed damp-proof course, electrical installations, smoke detectors and residual current devices; plumbing, drainage, gas fitting, air conditioning and heating; garage door opening mechanisms; swimming pools, spas, saunas and associated equipment; the operation of fireplaces and chimneys; alarm systems and intercom systems; soft floor coverings including carpet and vinyl, floating floors; window treatments; appliances including dishwashers, garbage disposal units, ovens, ducted vacuum systems; paint coatings; landscaping.

Limitation of Liability

This report is valid on the date of inspection. No responsibility is accepted for any matter not existing or evident or for any deterioration occurring after the inspection date.

The inspection is completely visual. Concealed areas where access is unavailable are unable to be inspected and are not reported on; such defects could include, but are not limited to:

- Breakage, blockage or interference with any concealed pipes, broken window mechanisms (sash cords) etc.
- Any part of the structure which is underground or concealed e.g. footings, wall framing, under floor coverings. Areas concealed by furnishings or stored goods or low clearances

No responsibility can be accepted for defects which are latent or otherwise not reasonably detected on a visual inspection without interference with or removal of any of the structure including fixtures, fittings, furniture, insulation or stored items within and around the building.

Safety & Reasonable Access

Australian Standard 4349.1 – 2007 3.2.2 The extent of accessible areas shall be determined by the inspector at the time of inspection, based on the conditions encountered at the time of inspection. The inspector shall also determine whether sufficient space is available to allow safe access. The inspection shall include only accessible areas and areas that are within the inspector's line of sight and close enough to enable reasonable appraisal. The Australian Standard 4349.3 defines reasonable access as "areas where safe, unobstructed access is provided and the minimum clearances are available; or, where these clearances are not available, areas within the consultant's unobstructed line of sight and within arm's length. NOTE: Reasonable access does not include removing screws and bolts to access covers."

Reasonable access is determined in accordance with the provisions of the following WHS requirements

Area	Access Manhole MM	Crawl Space MM	Height
Subfloor	500 x 400	Vertical clearance - Timber Floor: 400* Concrete Floor: 500	
Roof Interior	400 x 500	600 x 600	Accessible from a 3.6 m ladder
Roof Exterior			Accessible from a 3.6 m ladder

* To underside of bearer, joist or other obstruction to access.

Roof Cover Inspection

Work Health and Safety requirements determine that an inspector accessing a roof cover must be protected by harnessed safety lines and or edge protection. These safety measures are not practical during a presale inspection, therefore, this report is restricted to a "top-of-ladder" inspection. This report is not a guarantee that defects and/or damage do not exist in any part of the property not specifically seen and described by the inspector. This report is not a warranty against problems that may develop in the future.

Work Health and Safety Act 2011

A non-residential building and the common property of some group residential buildings will fall within the definition of a workplace for the purposes of the Work Health and Safety Act 2011,

The owners of workplaces must ensure that:

- premises are safe and without risk
- plant and substances are used without risk
- workers are trained in WHS, are aware of their obligations and do, in fact, act in a safe manner

A pre-purchase building inspection may identify some safety issues in the common area but it is not an audit conducted for that specific purpose. It is essential that every Owners' Corporation or Company consult an appropriately qualified specialist to ensure it meets its legislative obligations.

Safe Working Temperatures for the Inspector

When the temperature of a workspace (for example a ceiling cavity) exceeds the level considered to be safe according to WHS guidelines, the inspector will complete a risk assessment and the inspection will be limited accordingly. In the event that the inspector determines that the temperature exceeds safe working limits, generally, the inspection will be limited to the area immediately adjacent to the access for inspection.

Property Report

This report does not and cannot make comment upon: defects which may have been concealed; the assessment or detection of defects (including rising damp or leaks) which may be subject to the prevailing weather conditions; whether or not services have been used for some time prior to the inspection and whether this will affect the detection of leaks or other defects; the presence or absence of timber pests; gas fittings; environmental concerns; the proximity of the property to flight paths, railways, or busy traffic; noise levels; health and safety issues; heritage concerns; security concerns, fire protection; site drainage (apart from surface water drainage); the operation of swimming pools and spas; detection and identification of unapproved building work; detection and identification of illegal or inadequate plumbing or electrical work; durability of exposed finishes; neighbourhood problems; document analysis; any matters solely regulated by statute; any area or item that could not be inspected by the inspector. Unless otherwise specified, no examination has been made of any documentation of any type. We have not referred to statutory authority records nor have we examined any survey or water and sewerage service diagram or any other document prepared by any statutory authority or other party.

Purpose of This Report

The purpose of this report is to identify major defects or faults in the building for an intending purchaser, insofar as a property inspector can reasonably identify those defects or faults. This report contains a number of observations but is not intended to list every defect. Defects are common to all properties and are generally attended to during routine maintenance, redecoration and or renovation. Generally, ongoing maintenance items, upgrading requirements, cosmetic works and minor defects or faults have not been included. These items will depend on your personal requirements and budget. The property age and type also needs to be taken into consideration.

Concealed Surfaces

The inspection did not include breaking apart, dismantling, removing or moving objects, including but not limited to foliage, mouldings, roof insulation or sisalation, floor or wall coverings, sidings, ceilings, floors, furnishings, equipment, appliances, or personal possessions. The inspector cannot see inside walls, between floors, inside skillion roofing, behind stored goods or any other areas that are concealed or obstructed. The inspector did not dig, gouge, force or perform any other invasive procedures. Visible timbers have not been destructively probed or hit. In an occupied property, furnishings or household items may be concealing defects. Some defects may only be visible once furniture and other items have been removed from a property or when alterations are carried out. Built-in cupboards are usually filled with personal items and clothing. Some exterior surfaces may be obscured due to overgrown vegetation. Therefore, we cannot comment on the condition of the surfaces obscured or concealed by these or other items.

Roof Drainage and Water Penetration

Some water penetration problems and/or dampness do not become apparent and sometimes cannot be detected unless there has been recent heavy rain or prolonged periods of rain. Roof drainage is not tested. Therefore, no guarantee is given or implied that the roof will remain weatherproof in all weather conditions. If there is reference in the report to water stains within the interior of the property this is evidence that the roof and or drainage system has previously leaked. If moisture has been identified by the inspector using electronic testing equipment then it will be noted in the report. We recommend that you contact the inspector to discuss the probability of ongoing roof leakage. Particularly with respect to older properties and where the roof has a low pitch, engaging the services of qualified roof plumber to provide an expert opinion should be considered. The very best roof drainage systems can fail in extreme weather conditions sometimes impacted by conditions not related to the property under review. (Blocked or impaired stormwater drains for example).

Fire Protection Equipment & Ordinance Requirements

These are not covered by this report and these matters should be checked with the statutory authority. Any fire protection equipment has not been tested, e.g. smoke detectors etc.

Hazardous Materials & Contamination

Our inspection and report does not cover any hazardous materials or prior use of the land and building or any chemicals applied to land and buildings, which may have caused contamination.

Retaining Walls & Structural Columns

We are not engineers. Comment in respect of large and/or structural retaining walls and columns are beyond the scope of this report. It is not possible to determine from a visual inspection whether a retaining wall or column has been built in accordance with sound engineering principles and, even if it has, whether it is or will remain sound. An engineer should be consulted in any case where there are large, or structural, retaining walls, columns or similar building elements.

Cracking/Settlement/Movement & Structural Integrity

Where reference has been made in this report to cracking, settlement, movement or an opinion has been provided on structural integrity, it is important to note that we are not experts in this area and our advice is limited accordingly. If considered necessary, further advice should be obtained from a Structural Engineer before critical decisions are made. Any cracking reported should be monitored for further movement. If further movement is noted, a Structural Engineer should be consulted at the earliest opportunity. Cracking of masonry walls is very common in the ACT, particularly where there are volatile clay soils. There may be some superficial or hairline cracks that we consider have no structural implications which have not been identified.

Electrical, Gas & Other Service Installations

We are not licensed electricians, gas fitters or mechanical engineers. This report does not cover any matters relating to electrical and gas installations or any apparatus operated by electronic, mechanical or hydraulic means. This report does not cover any matters relating to the operation of electrical or gas appliances. Any comments made in this regard are from a general observation only. You should satisfy yourself as to the operation and condition of any appliances or other installations. Any comments made in this regard are from general observation only. There has been no electrical, data, security or fire detection system testing or investigation.

Plumbing & Drainage

We are not licensed plumbers and a specialist inspection of the water service, plumbing and drainage system including roof drainage is excluded from this report. We recommend an inspection by a licensed plumber and drainer to identify any plumbing faults or drainage problems.

Timber Pests

If this report does not include one, we strongly recommend that an independent inspection and report be obtained from an accredited Pest Inspector to determine whether the property is free from infestation (whether active or dormant).

Boundaries

Unless otherwise stated, the inspector has not gained access to any neighbouring properties and is therefore unable to comment upon the external state of any boundary fences and walls. The common areas of unit developments are not inspected. Any comments made in relation to common areas are strictly observational.

Rural Property Inspection

This inspection and report relates to the residential structure; rural improvements on the property are not inspected or reported on, any comments contained in this report relative to rural improvements are strictly observational.

Areas and Dimensions

Whilst every care has been taken to accurately quantify dimensions referenced in this report, we accept no responsibility for inaccuracies as supplying this information exceeds the requirements of a standard building inspection as per Australian Standard 4349.1-2007. In many instances scale plans are not available and therefore the reader should not rely on this report when making critical decisions relating to dimensions.

Special Purpose Reports

This Property Report does not contain any assessment or opinion in relation to any item which is the subject of a Special Purpose Property Report, or any matter where the inspection or assessment of which is solely regulated by Statute. Special Purpose Property Reports include comment on the following: common property areas, environmental concerns such as sunlight, privacy, streetscape and views, proximity of property to flight paths, railways and busy traffic or other neighbourhood issues; noise levels; WHS issues including, but not limited to the presence of asbestos, lead or other hazardous materials; heritage concerns; security or fire protection systems; climate control or water heating systems; analysis of site drainage apart from surface water drainage; swimming pools and spas; detection and identification of illegal and unauthorised plumbing work; durability of exposed finishes.

Compliance Report

The information within this report relies on the plans, survey reports, certificates of occupancy and other relevant documents supplied by the Environment & Planning Directorate, the client or their agent. Our company or its employees are not responsible for any omissions or errors where incomplete, inaccurate or illegible information is supplied. It is the responsibility of the property owner to resolve any file discrepancies with the relevant authority. Documentation of any plumbing or electrical alterations is not included in the building file. If required, this documentation can be obtained by the title holder from the relevant utilities provider. If the subject property features a second driveway or verge crossing, TAMS approval may be required. This information is not supplied in the building conveyancing file.

A site survey has not been conducted. No attempt is made in this inspection and reporting process to confirm that the existing improvements on the subject property are in strict accordance with approved plans. There may be variations in design, features and dimensions that are in conflict with each other. Additionally, there is no guarantee given that improvements are in accordance with the current Building Code of Australia. In most circumstances, there is no requirement to upgrade specifications to the current Building Code.

Timber Pest Report

This report is the result of a VISUAL INSPECTION ONLY. Inspection of the property and this report has been completed with reference to AUSTRALIAN STANDARD AS 4349.3 - 2010 Inspection of buildings Part 3: Timber Pest Inspections. In all instances throughout this report the inspector is referring to accessible areas only. Areas that were not accessible at the time of inspection or were concealed from view are not covered by this report. The inspector does not imply that inaccessible or partly inaccessible areas of the property were not, or have not been, infested by Timber Pests. This Report is not a guarantee that an infestation or future infestation and/or damage does not exist in any inaccessible or partly inaccessible areas of the property.

This inspection DID NOT include breaking, removing or moving objects, floor and wall coverings, roof insulation, foliage, furniture, appliances stored goods and personal possessions - these may all limit the scope of inspection. The inspector does not have access to the inside of walls, between flooring, inside eaves and skillion roofing. At NO TIME did the inspector use invasive procedures or bang/tap surfaces to reach conclusions. Where the property is occupied, please note that furnishings and household items may be concealing evidence of Timber Pests which may only be revealed when the items are moved.

This Report is confined to reporting infestation and/or damage caused by white ants (subterranean and damp wood termites), borers of seasoned timber and Timber Pests (wood decay fungi), present on the date of the Inspection. The Inspection did not cover any other pests and this Report does not comment on them. Dry wood termites and European House Borer (*Hyloterpes bujulus* Linnaeus) are excluded from the Inspection due to the extreme difficulty in locating the small colonies. Some species of termite and house borers, if discovered, will be reported (by law) to Government Authorities.

Determining Extent of Damage

This Report is NOT a structural damage report. You agree that we are not responsible or liable for the repair of any damage, whether disclosed by our report or not. Our inspectors are not necessarily specialised builders and any inexperienced opinion provided with respect to timber damage CANNOT be relied upon. The Report will not state the full extent of any timber pest damage; rather, we may provide comment on the damage for your information. If evidence of Timber Pest activity and/or damage is reported in the structure(s) or the grounds of the property, then you must assume that there may be further concealed structural damage within the building(s). This concealed damage may only be found when invasive procedures are applied to reveal previously concealed timbers. In the case of Timber Pest activity and/or damage WE STRONGLY RECOMMEND an invasive Timber Pest Inspection is undertaken and a qualified person such as a Builder, Structural Engineer, or Architect be engaged to carry out a structural inspection to determine the full extent of the damage and repairs that may be required.

Mould

Mould (also referred to as Mildew and non wood decay fungi) is not considered a Timber Pest. This report does not cover the inspection of Mould. If evidence of mould was observed during the inspection, it may be noted for your information. If you are concerned as to the possible health risk resulting from the presence of mould then you should seek advice from your local State or Commonwealth Government Health Department expert.

IMPORTANT INFORMATION:

This Report reflects the condition of the property existing at the time of the inspection date and may not reflect the current state. Timber Pests, particularly termites, may have gained entry to the property since the inspection date. Termites can, in a relatively short period, cause significant damage to both structural and non-structural timbers within and around the buildings of the property. Termites are difficult to detect and much of the damage caused may not be readily visible, if damage exists, it may be costly to repair. It is, therefore, strongly recommended that you promptly arrange for an inspection in accordance with Australian Standard AS4349.3 if this report is being read after one hundred and eighty (180) days from the date of inspection.

If the Report indicated the presence of termites, termite damage, previous activity or treatments, or recommends a treatment, you should obtain copies of the treatment proposal, any certificates of treatments carried out, details of all repairs including copies of quotations, invoices and any other reports. It is strongly recommended that you arrange for an inspection in accordance with AS 4349.3 to verify that the treatment has been successful and carried out in accordance with AS 3660.2 and arrange for a further building inspection in accordance with AS 4349.1. The person carrying out the inspection and this company will have no liability to you for any damage or loss you may suffer as a result of your entering the contract to purchase the property or in connection with completing the purchase of the property as a result of your failure to heed the advice given in this report, and may use such failure in defence of any claim that you may later make against any of them.
